

Smart locker systems for companies and office buildings.

Desk sharing, mail distribution, goods and tool distribution.

Smart locker systems can perform numerous tasks in companies. As personal lockers for employees to pick up goods and equipment, as an internal mail station in the office building and much more. Due to the versatility of our hardware and software, there are (almost) no limits. With one or more central VARIOCUBE Intralogistics Hubs you save time and unnecessary ways for your employees and suppliers. Automatic notifications of receipt or dispatch keep your mail traffic clear and traceable. High-quality locker systems protect your shipments from unauthorized access.

Advantages for companies, tenants and landlords.

Integrated into your interior design

A wide range of surface finishes, or custom made by carpenters / furniture manufacturers.

Flexible assignment

Allows use as needed, no unnecessary compartments. So you can use the space of their building more efficiently.

API to existing systems

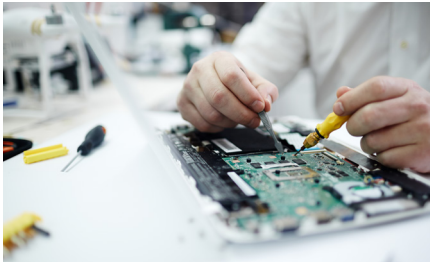

Our interfaces (API) allow the smart lockers to be integrated into existing software solutions.

One solution, numerous application possibilities.

Secure storage space, desk sharing, a solution.

Smart locker systems for companies offer an ideal solution for items that are to remain at the site permanently or only briefly overnight. The lockers can be assigned variably, so that your employees always have a suitable locker nearby and thus save time and travel.

Equipment pickup, return and service.

Defective IT equipment can easily be handed over without personal contact. With our smart locker systems, you can create a transfer point in the company that is independent of working hours. Replacement equipment can be stored in the locker and released to the respective employees as needed.

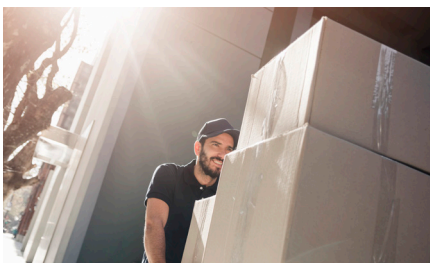

Provide tools flexibly in time.

Tool rental more transparent and flexible: You benefit from a precise history of who has rented which tool from when to when. This way, you know whether there is enough available and where an expensive special tool is currently located.

Simplify spare parts distribution and stock pickups.

Separate processes in terms of time: Your warehouse staff collect all the necessary parts and tools in a locker and send a pickup code to the assembly team after successful storage. The team can now pick up everything at a flexible time and prepare for work.

Internal mail distribution and dispatch.

Our solution: Smart locker systems and software interfaces into your systems. Your team at the reception or in the mailroom accepts mail and parcels, registers them and stores them in a locker. Then the department or an employee receives a message with pickup code. In this way, unnecessary trips can be saved and staff can be better deployed. Shipping can also be handled via the system.
