

# Locker systems for public spaces.

## Welcome to the Smart City.

Smarte Schließfachanlagen für den öffentlichen Raum wie am Universitätscampus, im Rathaus oder auf anderen öffentlichen Plätzen, werden in Zukunft eine immer wichtigere Rolle in Städten und Gemeinden spielen, um den wachsenden Anforderungen an Paketzustellung, Liefermöglichkeiten und den Warenaustausch gerecht zu werden.

Unser Alltag erfordert immer mehr Flexibilität, viele schaffen es unter der Woche nicht während der Öffnungszeiten zu Geschäften oder in die Postfiliale. Mit smarten öffentlich zugänglichen Schließfächern an belebten Plätzen, in Einkaufsstraßen oder Verkehrsknotenpunkten können diese Probleme gelöst werden.

## Public locker facilities at University Campus, City Hall, Theater, City of the Future.

The VarioCube locker system is the ideal smart locker system for public spaces. All that's required is a 230 V power connection, communication is via a built-in SIM card, so our system can also be set up later on with little effort.

Due to a multitude of user-friendly functions, numerous services can already be offered out-of-the-box. If these are not sufficient, we will work with you to develop a customized solution.

Well integrated, smart locker systems are an important building block of the smart city.

## A location with a multitude of possibilities.

---

### Click & Collect

---

With Click & Collect solutions, local retailers can easily hand over ordered goods.

### Parcel Receiving

---

Parcels can be left in the locker for the recipient:in, but pick-up orders can also be assigned to parcel service providers.

### Textile cleaning

---

Textile dry cleaners can receive the textiles to be cleaned via special locker sizes and return them after cleaning.

### Exchange of goods

---

Privately sold goods or rented items can be exchanged between private individuals and companies.

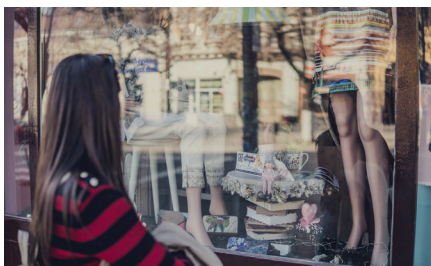

## Use cases for smart locker systems.

---

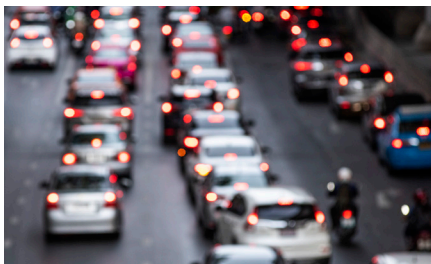

### Lockers at transport hubs.

The classic location for public locker systems are transportation hubs such as train stations, airports or other public facilities. Our smart locker systems now extend the benefits of these outdated facilities. Goods exchange, click & collect and package reception become possible through the use of Variocube solutions.

### Multi-channel solution for shopping streets.

Many small and large cities have them, the typical shopping street with many small stores and boutiques that invite you to stroll. Retailers with locations on such boulevards can increase the frequency of their street with a pick-up station. As an additional added value, it is also possible to open the facility to receive parcels. This can also attract new visitors and thus increase the range.

### Parcel stations as part of the last mile.

Here, locker systems for public spaces offer an ideal solution, where parcels can be picked up or deposited for collection by the parcel service. The parcel service provider no longer has to look for a parking space for individual parcels, get out, ring the bell and drive on again only to be unable to deliver the shipment. In the future, parcels can be delivered directly to a nearby location with lockers, saving both recipient and delivery person time and unnecessary travel.
