POBox - never miss a parcel again.

The ideal parcel and mail receiving solution for apartment complexes, multi-party buildings and office buildings.

With the combination of our lockers and the POBox software, residents can pick up packages and other shipments 24/7 at any time. No more long waits or unnecessary trips, and you increase the added value of the residential complex. With extensive features and an easy-to-use backend, a Variocube parcel box offers a variety of solutions for residents and property managers.

Due to the modular design, the size of the parcel box is adapted to the number of house inhabitants. Compartments with letter slots can be permanently assigned, while the large parcel boxes are flexibly assigned depending on the item and released again after removal. The residents will never receive yellow slips again.

Easy to use for recipients, messenger services and property management.

Our POBox.app was developed specifically for the needs of different users. An easy-to-use web application is available for recipients and parcel bots. For the administrator a user interface is available where the occupancy level and users can be managed.

Package reception and shipping

Parcels are deposited in the parcel box or picked up from there.

User management

Adding by the administrator:in or self-registration. Additional household members can be added subsequently by the user himself.

Easy storage

Parcel carriers can select the recipient directly on the display or deposit items using a P.O. box number.

Our user management is simple and flexible.

There are several ways to add users to a parcel box facility:

Addition by administrator
The property management/customer service creates the users centrally.

Self-registration by the users
Users log in to the system independently under POBox.app.

Other household members
After successful creation/registration, the users can independently add or remove further household members.

The benefits and applications of Click & Collect pick-up stations.

Apartment buildings or multi-apartment buildings.

For the attractiveness of an innovative and future-oriented residential property, a customized solution for the reception of goods plays an essential role. Smart parcel lockers provide an ideal solution here for parcel shipping and receiving.

Solutions for companies.

Especially in growing companies, the question often arises: How do I efficiently distribute incoming mail and parcels? Here we have the ideal solution with smart locker systems and open software interfaces into your systems.

How does the storage and collection process work.

Delivery

Delivery service or recieving department stores the parcel in a cube.

Notification

The recipient is notified through text message, email, slack or other means.

Pickup

The recipient enters their individual pickup code to receive their goods.

Return receipt

Pickup confirmation is logged for later reference.
