VC MobileLine – the mobile locker.

Ideal for trade fairs, events, etc. Flexible use as needed.

The MobileLine locker system was specially designed to meet the requirements of event organisers and equipment rental companies. Its compact size and robust wheels make it easy to transport to any location. By using our SafeCube app, guests can easily book a locker via their smartphone. All this without having to queue for a long time at the cloakroom as before. Online payment services can also be activated as needed to amortise costs more quickly. The flexible use and elimination of staff at the cloakroom allows you to scale the capacity of your cloakroom area.

Can be used anywhere thanks to castors and LTE router.

The electronic and locking components are of industrial quality. This makes our systems a reliable solution. Furthermore, they are independent of LAN networks or WLAN, since the integrated LTE router automatically establishes a connection to our cloud. The Locker only requires a 230V power connection. This makes it a flexible solution no matter where, no matter when. Plug & Play: After switching on the power supply, the system starts up automatically and retrieves all necessary information from the VC Cloud. No additional set-up effort is necessary.
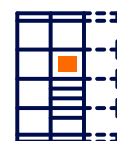

Simple set-up - SafeCube

The SafeCube app enables a simple set-up process for each event. The connection to the cloud is encrypted.

Intuitive use

Intuitive operation on the touch screen and the web app offer your customers a premium service.

Compact size & expandable

The flexible design allows the system to be tailored to your requirements. An extension is also possible at any time.

Flexible plant size & design

Due to the individual production of the systems, we can respond to your wishes regarding the total size, number of modules, type of transport and surface decors used.

# The advantages of SafeCube and the MobileLine.

Payment services and readers

Online payment services or payment terminals for EC or credit cards can be integrated. Optional integration of NFC & barcode readers.

Keyless - reduce costs

Save time and money - no lost keys or forgotten number combinations.

Interface to your systems

With our API, we can integrate our applications into your CRM, ERP and shop systems.

The booking process with SafeCube for daylockers.

Users register with their telephone number directly on the touch screen of the MobileLine locker system. They receive the link to the booking platform via SMS. Alternatively, the URL can be shared with guests in advance. The desired lockers are reserved on the booking platform, opened at the touch of a button and cleared again after use. Registration is only required once. For future use, the booking platform can be opened directly on the smartphone without having to register again.

Registration

Users register at the locker using the touchscreen or via their smart phone.

Authentication

The phone number is saved by the system and a digital key card is issued to the users.

Choose locker

Users choose one of the available lockers.

Use locker

Users can now use their locker freely via their digital key card (smart phone).
